EDUCATION

University of Cincinnati

Graduating: May 2029

Bachelor of Science in Computer Science, Minor in Finance

- Primary Coursework: Introduction to Computer Systems, Data Structures, Programming Languages, Discrete Math

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL (MySQL and Postgres SQL), JavaScript, TypeScript, HTML5/CSS3

Technologies: Git, Docker, Azure, AWS, Github Actions, Jenkins

Concepts/Frameworks: React, Django, Tailwind, Angular, Java Spring, Linux

EXPERIENCE

Software Engineering Intern

May 2026 – Aug 2026

Kentucky Farm Bureau

Louisville, KY

- Developed a mobile photo upload application (React/Java Spring) that reduced total upload time by 80% compared to the previous application, now deployed statewide across all claims adjusters
- Built a reusable React template with pre-configured architecture for company-wide use, adopted by 2 new projects to date and reducing setup time for future development
- Designed and built a Power Apps/React tool that digitized a manual claims approval form, adding an analytics dashboard with charts to visualize submission data and streamline the approval workflow for the claims department

Software Engineering Intern

Dec 2024 – May 2026

Castellan Group

Louisville, KY

- Refactored a legacy Django app into a Django REST API, improving system modularity and scalability by 40% and enabling new backend services
- Designed backend integrations and clean REST endpoints/data models to support a new React front end, improving reliability and performance
- Configured a GitHub Actions CI/CD pipeline and integrated Azure cloud services (databases, storage, app services), cutting release time by 30% and boosting scalability and observability

Software Engineering Intern

Mar 2024 – Aug 2024

Stored Value Solutions

Louisville, KY

- Developed and optimized the Web Balance Inquiry (WBI) platform (React + Java Spring), improving performance and satisfaction for 20+ client companies
- Enhanced the E-Gift Card (EGC) platform (Java Spring Tiles), improving backend functionality, data flow, and UI to boost online transactions
- Resolved 80+ production service requests and deployed a project-wide testing pipeline with an external partner, cutting pre-release defects by 15%

PROJECTS

CEAS Tribunal Website | Django REST API, React

Sept 2024 – Present

- Owned the full-stack redesign of the College of Engineering and Applied Sciences (CEAS) Tribunal platform, building a React/Django application that publishes university events and information while streamlining internal workflows for all 18 Tribunal committees
- Designed and deployed Dockerized infrastructure with Nginx and University of Cincinnati reverse-proxy integration; built Django Groups-based authorization for 43 members, enabling role-specific submission review, document access, progress tracking, and UC SMTP-powered transactional email notifications

Capitalize | Django REST API, React

Mar 2024 – Nov 2024

- Developed an E-Learning Platform targeted at teaching teenagers and young adults about financial literacy
- Built an effective platform designed with an interactive dashboard to allow for easy progress tracking and access to utilities inside the application
